1 April 2025

## MANAGER COMMENTS

RIO Silver Lining GBP posted a gain of 2.96% in the first quarter of 2025, this profit on the back of the final quarters gain of 6.24%. All those invested are aware that Silver Lining has had an exceptional year in 2024, with four consecutive quarterly gains which produced a net return of 29.88%.

The Market - This year, precious metals have demonstrated remarkable strength, posting substantial gains amid global factors driving international investor demand. Despite the strong performance seen during 2024, I would again bring attention to the fact that silver performs best in the late stages of a major rally for gold. In the fourth quarter comments I had clearly stated that silver may be setting up to begin what could be a very significant surge higher. I also said that silver is likely to rally far higher should gold move to a new high, gold in fact rallied to an all-time high in March. There were fundamental reasons why silver could produce a strong gain. At that time the price of silver was around £23.09 per ounce, and I brought members attention to the fact that the statistics had clearly shown that there has been a significant rise in industrial uses and, as such, any shortages could see the metal easily rally to £26 an ounce or more. Today the metal is over £26 an ounce and my predictions have been proven correct.

## INVESTMENT OBJECTIVE

To provide a secure alternative to that offered by the lackluster standard silver investment products and or funds offered by the investment industry. The aptly named "Silver Lining" holds 100% of its Bullion assets in unencumbered and uncirculated one kilo Silver bars, officially circulated by several government mints.

To date the account has achieved its target and since launch it has outperformed the statistical return of untraded physical silver (buy and hold strategies). Statistical analysis confirms that the silver to gold ratios favours silver, the fact that it remains technically under bought in current market being another plus. Silver does not offer the same level of security that gold does due to its price volatility. However, the constant fluctuations result in more opportunities to buy and sell at profit, making it a more speculative investment. Owning physical silver bars and silver coins can offer an effective way of diversifying an individual's investment portfolio, given that it is becoming widely considered that we are entering an overvalued stock market condition today. It is ideal for members wishing to spread risk whilst providing additional protection against other investments.

## INFORMATION

NAV	141.78

## ASSET ALLOCATION (%)

## VOLATILITY & RISK (Since Launch)

Annualised Volatility	19.27%
Return for Period	37.34%
Best Quarterly Return	11.89%
Worst Quarterly Return	-1.86%
Risk / Reward Ratio	20.08:1

The risk/reward calculation is a division of net profit (the reward) by the price of your maximum risk. Any investor should determine their acceptable risk, but it is always best to be more conservative with risk than aggressive with reward.
